STATEWATCHPRO

State Government Trends Insights Report

Sample Edition

A mock of the quarterly report for vendors and state government teams. It shows the sections a real issue would contain. Every figure is an example index.

> **Disclaimer.** This Sample Edition is not a published report. The marks in it are illustrative data, not actual figures. They are not spend, awards, prices, market share, or legislation from any state. Do not cite them. A later edition would link each figure to its public source. In this file every source line reads “Example source.”

What this sample walks through

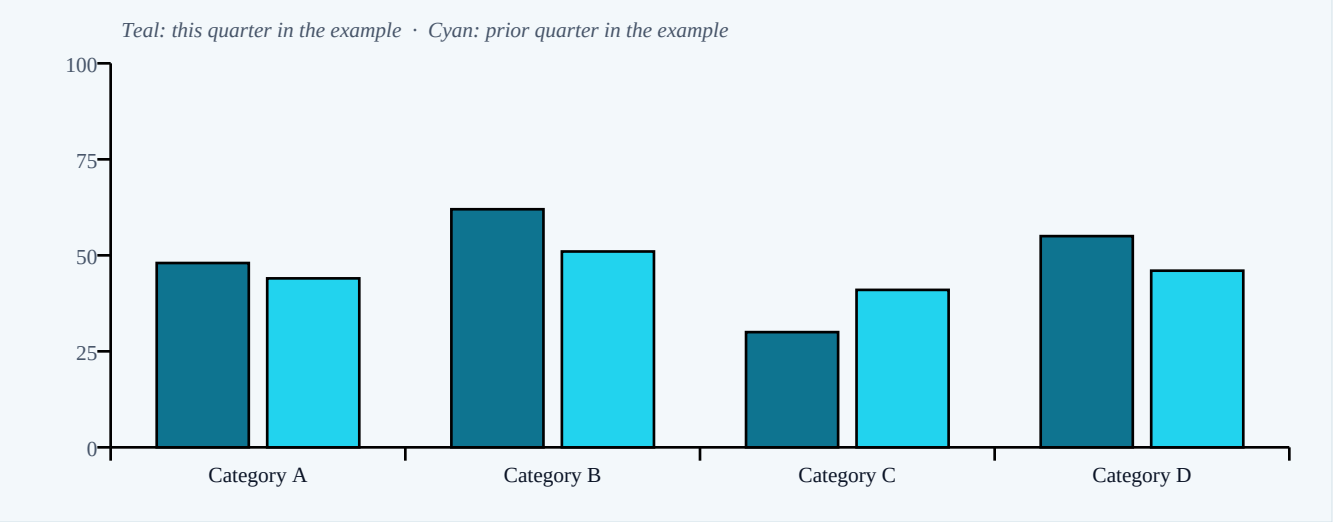

- Spend and award volume by category, agency type, and state, with a quarter-over-quarter and a year-over-year comparison.
- Categories that are growing or declining in the example.
- Emerging initiatives: AI, cybersecurity, broadband, and modernization of large program systems.
- Shifts in the example vendor index for Vendor A, Vendor B, and Vendor C.
- Price and unit-cost benchmarks, as an example index.
- Legislation trends and example model bills.
- A short insights summary of the example, not of any real state.

Labels used throughout: Category A–D, Agency type 1–3, State 1–3, and Vendor A–C. None of these is a real state, agency, or vendor.

Spend and award volume by category

A quarterly issue compares award volume and spend for each category. This sample uses an example index so the shape of the chart is visible without standing in for real money or real counts. Teal is the example index for the sample quarter. Cyan is the example index for the prior quarter.

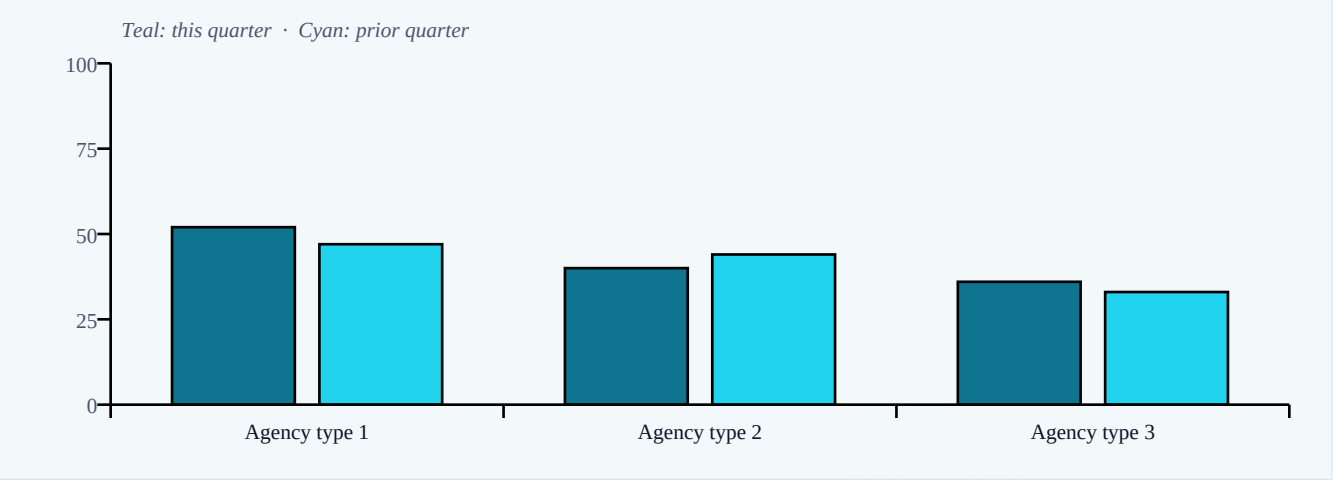

Example label	This quarter	Prior quarter	Prior year
Category A	48	44	40
Category B	62	51	45
Category C	30	41	44
Category D	55	46	50

Source: Example source. Example index only. Not dollars and not a count of awards.

SAMPLE — ILLUSTRATIVE DATA, NOT ACTUAL FIGURES

By agency type and by state

The same example index is split by agency type and by state. Agency type 1, Agency type 2, and Agency type 3 are placeholders. State 1, State 2, and State 3 are placeholders. Quarter-over-quarter is this sample quarter against the prior sample quarter. Year-over-year is this sample quarter against the sample quarter a year earlier.

Example label	State 1	State 2	State 3
Agency type 1	52	40	33
Agency type 2	40	48	29
Agency type 3	36	31	44

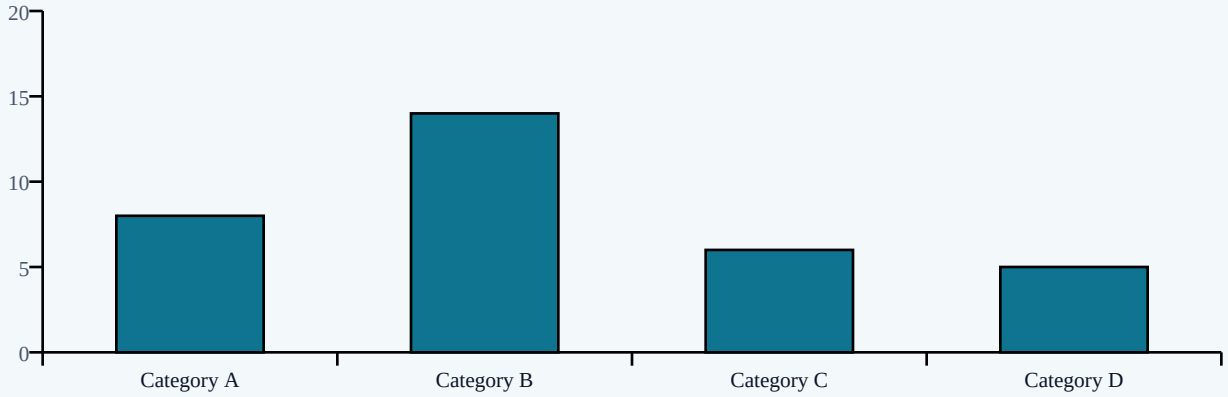

Source: Example source. Example index by placeholder state and agency type.

Growing and declining categories

A real issue would say which categories are growing and which are declining, and would link the comparison to the source documents. In this sample the direction is assigned so the layout can be reviewed. It is not a finding.

Example magnitude of change in the sample (direction is in the table)

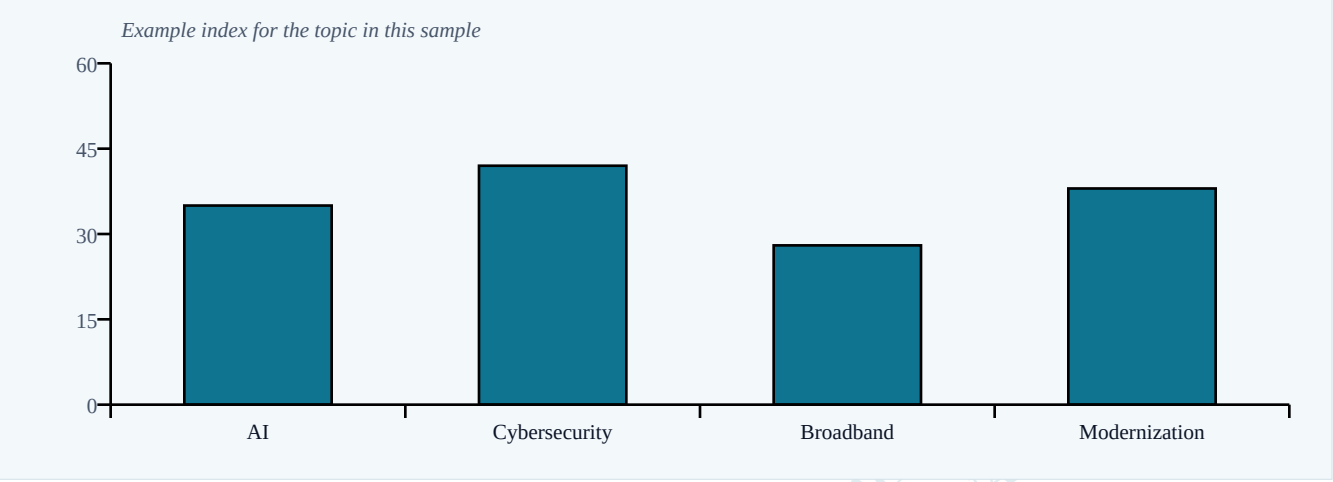

Example label	Direction in this sample	Compared with
Category A	Growing	Prior quarter and prior year
Category B	Growing	Prior quarter and prior year
Category C	Declining	Prior quarter and prior year
Category D	Growing	Prior quarter only

Source: Example source. Direction words describe the example index, not a real market.

SAMPLE — ILLUSTRATIVE DATA, NOT ACTUAL FIGURES

Emerging initiatives

The report has a place for initiatives that are showing up in solicitations and legislation. The topics below are the kinds of initiatives the section is built to hold: AI, cybersecurity, broadband, and modernization of large program systems. The example index beside each topic is not a measure of how common that work is.

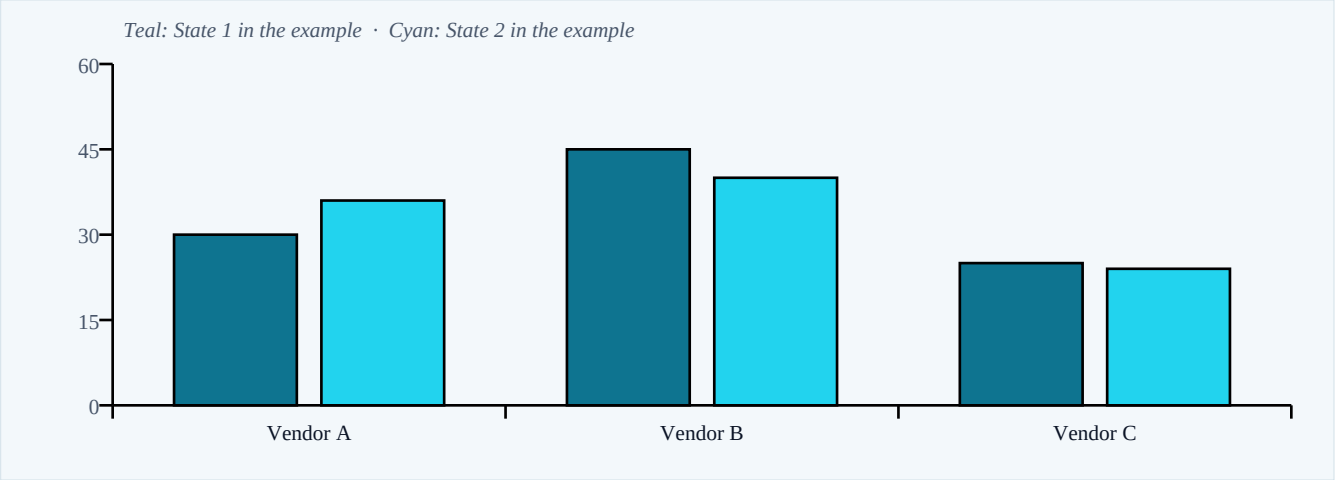

Initiative the section can cover	Example index	Where it appears in this sample
AI	35	State 1 and State 2
Cybersecurity	42	State 1, State 2, and State 3
Broadband	28	State 3
Modernization of large program systems	38	State 2

Source: Example source. Topics are illustrative. The index is not a count of solicitations.

SAMPLE — ILLUSTRATIVE DATA, NOT ACTUAL FIGURES

Vendor market share shifts

Vendor names in this sample are Vendor A, Vendor B, and Vendor C. The chart is an example share index, not a percentage of any real market and not a ranking of real firms.

Example vendor	State 1	State 2	Shift in this sample
Vendor A	30	36	Higher in State 2
Vendor B	45	40	Lower in State 2
Vendor C	25	24	Nearly flat

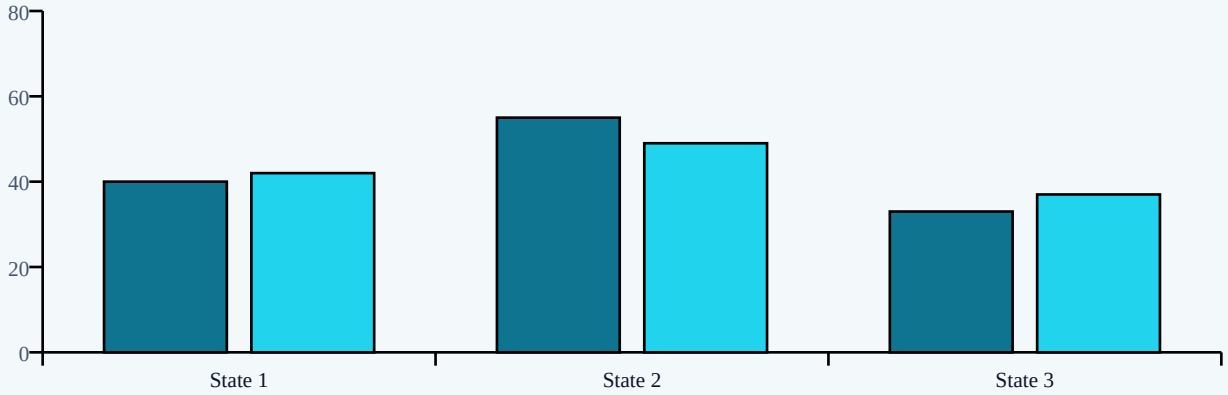

Source: Example source. Example share index. Not a real market share.

Price and unit-cost benchmarks

Benchmarks in a real issue would trace to the documents states publish. Here the unit-cost view is an example index per unit, so the table can be laid out without quoting a real price.

Teal: Category A example index per unit · Cyan: Category B example index per unit

Example label	State 1	State 2	State 3
Category A, example index per unit	40	55	33
Category B, example index per unit	42	49	37
Category D, example index per unit	28	31	36

Source: Example source. Example index per unit. Not a price from a contract.

SAMPLE — ILLUSTRATIVE DATA, NOT ACTUAL FIGURES

Legislation trends and model bills

This section is where a real issue would follow bills and model language moving from state to state. The rows below are example model bills, not enacted legislation and not bills from any legislature.

Example model bill	Seen in this sample	Example pattern
Example model bill 1	State 1, then State 2	Similar language in the example set
Example model bill 2	State 2 and State 3	Introduced in the example, not enacted
Example model bill 3	State 1 only	No spread in the example

A published issue would name the bill, the chamber, and the source register, and would link each row. This sample stops at the layout and marks the source as an example.

Source: Example source. Example model bills only.

Insights summary

The last page of an issue is a short reading of the quarter for vendors and for state government teams. The sentences below only restate the example. They are not findings about any state.

In the example, Category B carries the highest example index and Category C is the one marked declining.

The example gives Vendor B the higher example share index in State 1, and Vendor A the higher one in State 2.

AI, cybersecurity, broadband, and modernization of large program systems are present as topics the section can hold. The example index does not say how widespread they are.

Example model bill 1 is the only one in the sample that moves from State 1 to State 2.

Vendors can use a real issue to see where similar work is being bought. State government teams can use it to benchmark against other states. Both would still open the source behind each figure.

Disclaimer. This Sample Edition is not a published report. The marks in it are illustrative data, not actual figures. They are not spend, awards, prices, market share, or legislation from any state. Do not cite them. A later edition would link each figure to its public source. In this file every source line reads “Example source.”
